# SKAGGS CATHOLIC CENTER

DRAPER, UTAH, USA

**The Skaggs Catholic Center is currently the largest primary and secondary Catholic school in the United States. It includes a High School, Middle School, Elementary School, Kindergarten and Daycare Center.**

During the design process, Utah Controls was chosen as the integrator of choice due to our ability to seamlessly integrate each of the various electronic control systems.

As a result, this campus of buildings is one of the best examples of a truly integrated control system in the State.

Utah Controls designed and installed a complete HVAC, Access Control, Intercommunication System and a Closed Circuit Television System to insure the safety and comfort of the staff and students.

Utah Controls utilizes a TAC Building Control System to control over 280 terminal reheat boxes and 16 air-handling units with a central hot and chilled water plant feeding all buildings. Each of the Laboratory areas include controls for both the fume hood and chemical exhaust fans.

The security system includes over twenty doors of proximity card access and over twenty High Resolution Color CCTV cameras which are recorded 24-hours a day on state of the art digital video recorders.

A single I-Net Seven software package operates both the HVAC and the Access Control System. The integrated control system provides a powerful interface which allows the facility managers to provide the comfort and safety the tenants demand, while still providing maximum energy savings.
